Medium format film holder for scanner

Used 4 plastic rules:

This rule has profile:

It has a little "step".

Two rules glued together forms a groove for film:

I used this groove for film holding. Two rails with film loaded:

Holders must be fixed together in right position (with). Super glue (hardens in seconds) was used:

Do not cover this space (see next illustration for proper distance) – it is used to notify scanners "eye" if lamp is already warmed up.

Such a plastic rules was used because of its smooth surface – does not scratch scanners glass.

Also are transparent and has clear distance marks – for easy precise fixing in right place.

Construction with film loaded

glued

Those two used for right frame positioning on scanners screen. They are not glued with each other, nor with film holder (but you can fix all it together).
